COMPUTER ENGINEERING STUDENT & FULL-STACK DEVELOPER

Final-year **B.Tech** student at Cummins College of Engineering for Women, Pune. Build complete projects from scratch – mobile apps, full-stack platforms, DevOps pipelines, AI systems. Currently shipping code at MilesWeb (Flutter + billing APIs). Experienced across **Flutter, Java, Python**, Firebase, and modern cloud infrastructure.

FEATURED PROJECTS

VersionVibe – Smart Version Control for Text Editing	<i>Java, Java Swing, SHA-1 Hashing, Tree Algorithms</i>	GitHub
- Built a text editor from scratch with no libraries, using a tree-based branching version control system that preserves undo history when you branch – solves the problem where most editors lose redo history after undo - Used SHA-1 content hashing to detect duplicate versions and store only diffs, keeping memory use low across hundreds of versions. Shipped with optimal data structure design 2nd Runner-Up, Buffer 6.0 DSA Challenge – won for innovative tree-based approach to version control		
LOOM – AI-Powered Life Planner	<i>Flutter, Firebase, Hive, Groq API (Llama 3.1), Claude API (Sonnet 4)</i>	GitHub
- Built an offline-first planner (Hive local storage) merging tasks, habits, notes, mood tracking, and screen time into one unified app – works fully offline with optional Firebase cloud backup for sync - Integrated Groq Llama 3.1 for hands-free voice assistant (speech-to-text → intent parsing → action execution → text-to-speech) and Claude Sonnet 4 to generate weekly wellness reports as multi-page PDFs with mood/productivity insights - Beta-tested with 10 real users; reworked Hive storage logic and notification timers based on user feedback. Shipped with ~11,300 lines of Dart across 21 files with production-grade architecture		
Runway – Placement Tracker & Analytics	<i>JavaScript, Firebase (Auth, Firestore, Storage), Chart.js, Vercel</i>	GitHub Live
- Built a single-user placement tracker for tracking 50+ companies: CGPA-based eligibility checks, application stages (Applied → Shortlisted → Interviewing → Selected), resume versioning per company, recruiter contact fields, append-only notes timeline - Engineered analytics dashboard with Chart.js funnel chart showing conversion rates, CTC comparison table across companies, acceptance/rejection rates, and CSV export for data analysis - Used Firebase Auth + Firestore as backend-as-a-service (zero server ops). Still actively used daily during placement season. No multi-user support by design – optimized for single individual workflow		
Quizely – Full-Stack Exam Platform	<i>Java 21, Spring Boot 4.0.5, PostgreSQL, Hibernate, Spring Data JPA</i>	GitHub Live
- Built a full exam platform supporting objective and subjective questions – MCQs auto-grade instantly using configured answer keys, subjective answers queue for teacher manual grading with partial marks support - Engineered teacher dashboard showing all student submissions, rich grading interface for subjective answers, and analytics: student performance heatmap, question difficulty tracking, OA clear rates per question, funnel charts by performance tier - Used composite JPA keys for (test_id, question_number) and custom repository queries for complex grading workflows. Deployed as Docker multi-stage Maven build on Render with zero downtime		
Email-to-Telegram Notifier	<i>Python, Gmail API, GitHub Actions, GitHub Models</i>	GitHub
- Polls Gmail every 5 minutes for emails from a configured allowlist of senders (placement/college emails). Extracts email body, summarizes with AI using GitHub Models, sends Telegram alert with sender name, subject line, and AI-generated summary - Runs entirely on serverless GitHub Actions infrastructure with no backend server. Zero monthly cost, zero billing. Handles email parsing, AI summarization, and Telegram API integration end-to-end		
Moonly – Period Tracker	<i>Flutter, Firebase</i>	GitHub
- Track periods with flow logging, view interactive calendar with insights, predict next cycle based on 3-cycle average, share data with partner via shareable code. Cycle prediction algorithm learns from user patterns - Local notifications for reminders. Real-time Firebase Auth + Firestore sync. Offline-capable with local storage		
NOVA – Weather Dashboard	<i>Node.js, Express, Docker, Jenkins</i>	GitHub Live

- Terminal-style weather dashboard showing live temperature, wind, humidity, sunrise/sunset via REST API. Minimal, fast-loading interface for quick weather checks
- Full **CI/CD pipeline** : GitHub → Jenkins → ESLint (linting) → Jest (testing) → Docker (containerization) → Render (deployment). Auto-deploys on every push with automated testing

TECHNICAL SKILLS

Languages : Python, Java, JavaScript, SQL, Dart, HTML, CSS

Frameworks & Backends : Spring Boot, Flutter, Hibernate, Spring Data JPA, Firebase (Auth, Firestore, Storage)

AI & LLM : Groq API (Llama 3.1), Claude API (Sonnet 4), Prompt Engineering, GitHub Models

Databases : Firebase Firestore, Hive (offline-first), PostgreSQL, MySQL

Cloud & DevOps : Docker, GitHub Actions, Jenkins, CI/CD pipelines, Render, Maven, AWS (EC2, S3)

Concepts & Patterns : Tree Algorithms, DSA, OOP, REST APIs, OAuth2, Content Hashing, System Design

EXPERIENCE

Web Developer Intern
MilesWeb Internet Services

July 2026 – Present
Remote – Nashik, Maharashtra

- Developing a **Flutter-based Android app** integrating with the **WHMCS billing platform** using **OAuth2-secured HTTP POST APIs** – implementing customer dashboards for invoices, account status, and payment history
- Built front-end screens for account lookups and invoice display with real-time sync to billing backend; handling API timeouts gracefully and implementing offline caching for slow network conditions

CERTIFICATIONS & ACHIEVEMENTS

- **Buffer 6.0 DSA Challenge** – 2nd Runner-Up (June 2025). Won with VersionVibe: tree-based version control using custom data structures, SHA-1 content hashing, and memory-efficient diff storage instead of linear undo/redo.
- **GeeksforGeeks GfG 160 Challenge** – Completed all 160 DSA problems (2025). Covered arrays, linked lists, trees, graphs, dynamic programming, hashing, sorting, and searching across multiple difficulty levels.
- **AI Chatbot Rumble** – Built an NLP-focused chatbot for the competition (2024). Focused on intent parsing and entity extraction using rule-based approaches for conversational understanding.

EDUCATION

B.Tech Computer Engineering
Cummins College of Engineering for Women, Pune

2024 – 2027 (Final Year)
CGPA: 7.6/10

Diploma in Information Technology
Government Polytechnic Pune

2021 – 2023
84.60%

SSC (10th Grade)
Karmveer Bhaurao Patil High School, Mokhada

2019 – 2020
86.60%
